XTQ-E-MILLIOHM
E-MILLIOHM Bonding Tester
• Specialized electrical testing device used to measure very low electrical resistance, typically in the milliohm (mΩ) range.
• It is commonly used in applications where ensuring a strong electrical bond or connection is critical, such as in grounding systems, electrical wiring, and bonding of metal components in various industrial, automotive, and aerospace environments.

Key Uses:
1. **Grounding and Bonding:** Ensures low-resistance connections between different components to avoid voltage differences that could lead to safety hazards, like electrical shock or fire.
2. **Quality Control:** Verifies that wiring, connectors, and metal joints meet required resistance standards, ensuring the electrical integrity of the system.
3. **Automotive and Aerospace:** Tests electrical bonding between metal surfaces, which is essential for maintaining the functionality of electrical systems and preventing electromagnetic interference.
